

# Drinking water pipe replacement, SEVAB

## WATER SUPPLY

The company SEVAB had to replace the old drinking water pipe made from Eternit in Strängnäs, Sweden. To minimise traffic disruption, it was important to use as short trenches as possible.

Alvenius was selected to supply its quick coupled FlowMax pipe system. The lightweight FlowMax pipes and quick couplings enabled the old pipe system to be replaced in no time. No special tools, special training or welding were required.

The replacement was completed by excavating trenches measuring only about 15 m in length at a time, with minimal impact on traffic.

Thanks to the quick coupling system the installation was 10-15 times faster compared to welding of conventional pipes.

All pipes and fittings were coated with CorroFlo and RocShield, for maximum corrosion protection and is certified in accordance with C5.
