

# Norra Länken, Stockholm

## FIRE PROTECTION

Norra Länken (The Northern Link) has been northern Europe's biggest road tunnel project, covering a total distance of 13 km. All road tunnels are one-way.

The tunnels should be fitted with a fire protection system that meets corrosivity classification C5. This system was designed by Brandskyddslaget in Stockholm using Alvenius solutions.

Alvenius supplied more than 19 000 m of FlowMax pipes, couplings and fittings. Every part of the system is CorroFlo-coated for maximum corrosion protection.

Speedy weekly deliveries are set to substantially reduce the installation times.

The combination of low weight, quick installation time, wide product portfolio, corrosion protection and availability has led to a collaboration over several years between Alvenius and the installation company, Bravida/C2M.

### Facts

Country:..... Sweden  
 Dim:..... 60, 107, 161 and 219 mm  
 Media:..... Fire extinguishing water
