

Sälen Skiresorts

SNOW MAKING

With more than 100 slopes with modern snowmaking equipment, Sälen is the biggest ski resort in the Nordic Countries in terms of visitors and areal.

Sälen is one of the most common destinations for Swedish families during the winter season, located only about 4 hours from the capital of Stockholm.

This is part of the reason why the resort attracts more than 1 million visitors every season.

With 169 days with snow guarantee it is important for Sälen to ensure their snowmaking equipment is in good shape. This results in continuous extensions and upgrades of the slopes and snowmaking systems.

During the years Alvenius have delivered many kilometers of pipes to the resorts in Sälen. One example is the riser pipeline with a dimension of 323 mm and maximum pressure 65 bar, used to increase the capacity of the complete resort.
